EU Mineral occurrences for selected commodities

SOURCE MAP
The International Geological Map of Europe in scale 1:5,000,000 shows the Pre-Quaternary geology of Europe. The map was developed under the direction of the BGR and the auspices of the Commission for the Geological Map of the World (CGMW) with contributions from 48 European geological services and more than 20 scientific institutions.

SOURCE DATA
The data points showing occurrences and deposits come from the EU 7th Framework Programme project Mineral4EU (http://minerals4eu.bgrm-ree.fr/), the GeoERA project Mint4EU (geoera.eu/projects/mint4eu7/), and the EuroGeoSurveys initiative European Geological Infrastructure, EGDI (www.europe-geology.eu).

Note: There is no data from Germany as that country has not provided data to the above-mentioned projects.
